As in 2015, the THERMPROCESS Symposium will be organised again on the occasion of THERMPROCESS 2019, taking place in exhibition hall 9, booth D74.

**The Symposium functions as a supporting program to the main trade show and gives your company an ideal opportunity to present your technology based products and processes to a wider audience. Take the chance to share your new ideas at the Symposium.**

This year's main topics are:

- Conservation of resources and energy efficiency under consideration of CO<sub>2</sub> and NO<sub>x</sub> reduction
- New heating concepts in thermo process technology
- Challenges of fluctuating gas quality, e.g. with feed-in of alternative fuels
- Requirements for thermo process technology due to changing user requirements (e.g. electrification of the powertrain in automotive engineering)
- Industry 4.0 and its implementation in thermo process technology
- New burner technologies

Each speaker will have 30 minutes for his presentation including discussion. You may give your presentation in English or German. Please note that no simultaneous translation is available.

Visitors of the trade fairs GIFA/METEC/THERMPROCESS/NEWCAST may join the Symposium ad hoc and at no charge. All lectures will be available for download.

The fee for participation in the Symposium amounts to

**EUR 1.000 per speech for VDMA/FOGI/CECOF/IHEA/JIFMA members**  
**EUR 1.500 per speech for other participants**

**We are looking forward to receiving your registration and hope we could spark your interest.**
